

Felipe Scofano

Felipe Scofano is the global lead of SBM's Robotics Program, responsible for the strategic deployment of advanced robotics technologies to enhance safety and efficiency in SBM offshore fleet. Mechatronic engineer, with 15 years of direct experience in applied robotics, Scofano has been at the forefront of developing and deploying innovative solutions, including mobile robots and continuum flexible manipulators, for use in challenging environments. His expertise lies in bridging the gap between technology and field application, ensuring that robotic solutions are effectively and safely deployed to address real industry challenges.
